

Mohamed Idris

Senior Frontend Engineer

Chennai, India | +91 701 022 1314 | idris@idrism.com | [linkedin.com/in/idris-m](https://www.linkedin.com/in/idris-m) | idrism.com

PROFESSIONAL SUMMARY

Frontend engineer with 8 years of experience building enterprise React and TypeScript applications. At Comcast (FreeWheel), responsible for the forecasting UI platform: architecture, sprint planning, code review standards and design system adoption for a seven-person pod. Experienced in performance tuning, automated testing with Jest, Vitest and Playwright, and mentoring engineers, with earlier work for Verizon and Walgreens at Cognizant.

TECHNICAL SKILLS

Frontend:	React, Next.js, TypeScript, JavaScript, Redux Toolkit, React Hooks, Context API
Styling:	Tailwind CSS, WCAG 2.1 AA accessibility
APIs & Auth:	REST APIs, GraphQL, JWT/OAuth
Testing:	Jest, Vitest, React Testing Library, Playwright (E2E)
Architecture:	Micro-frontends, design tokens, Core Web Vitals, component-driven development
DevOps:	Webpack, Vite, Git, GitHub Actions, CI/CD, Docker
Leadership:	Sprint planning, code review standards, mentoring, cross-team scoping, Agile/Scrum
Tools:	Jira, Figma

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer · Comcast / FreeWheel MRM, Chennai, India

Sep 2024 - Present

- Led a seven-person frontend pod: sprint planning, 4-7 PR reviews a week, and PR checklists with ESLint and pre-commit standards that cut rework cycles by about 40%. Mentored 5 engineers through weekly architecture reviews.
- Added GitHub Copilot as a first-pass PR reviewer with severity tags. Human reviewers still gate business logic before merge, which shortened turnaround on complex PRs.
- Led UI delivery of the RFP forecasting platform (creation workflow, results page, real-time availability preview) for 200+ global stakeholders. Built the dynamic budget model forms for 6+ models (CPX, SOV%, SOP%), a hierarchical ad unit selector, and a permission-based Load Preset feature with a paginated data grid.
- Wrote the deprecation impact analysis for the legacy forecasting module: route inventory, legacy-to-new URL coverage matrix, risk classification and preconditions for safe decommissioning. Engineering and product leadership used it to plan the migration roadmap.
- Spotlight Award (Q2 2025)** for shipping forecasting modules on schedule under pressure. **High Five Award (Q4 2025)** for cross-team collaboration.
- Introduced Jest, Vitest and Playwright E2E tests across 40+ components and reached 90% coverage. Using AI tools to generate tests cut authoring time by about 3x.
- Owned design system adoption for the pod: defined Spark UI usage standards and Figma-to-code token conventions across 40+ components, reducing visual inconsistencies across FreeWheel MRM screens.
- Cut load time on the ad-forecasting screens by about 35% for 200+ daily users using React.memo, route-level code splitting, lazy loading and virtualized data grids, with a measurable Core Web Vitals improvement.

Frontend Developer · Cognizant, Chennai, India

Dec 2021 - Sep 2024

Verizon Enterprise Migration (Feb 2023 - Sep 2024)

- Architected the legacy-to-React/Redux migration for a Verizon enterprise platform: built a 15+ component library on Tailwind CSS design tokens, adopted by 10+ engineers, with a 60% system performance uplift, 40% shorter page loads and 85% automated test coverage.
- Set component standards and code review templates adopted across the wider Verizon engineering team, reducing PR back-and-forth and ramp-up time for new engineers.

Walgreens Boots Alliance (Dec 2021 - Dec 2022)

- Led frontend development of a CDC-compliant React vaccination booking platform. Met WCAG AA across all user flows and optimized APIs for 60% faster data retrieval, with appointment completion rates up 30%.
- Built reusable appointment scheduling components on Walgreens' internal design system, keeping to design token rules across booking flows for a nationally deployed platform.

Web Development Engineer · CodeCraft Technologies, Bangalore, India

Jan 2021 - Dec 2021

- Built 6+ custom UI components for an industrial safety management platform where no open-source option fit, including a Google Maps integration with address search, geolocation and drag-to-geocode marker placement.
- Routed Geocoding API calls through the backend to get around Google's IP-based key restrictions. Cut API over-fetching by 25% and page load times by 30% through GraphQL query optimization.

Web Developer · Zinavo Technologies, Bangalore, India

Aug 2018 - Dec 2020

- Delivered 15+ web applications across tour booking, venue management and travel platforms, integrating PayU Money, CCAvenue and Razorpay payment gateways, AuthBridge background-check APIs, multi-vendor dynamic pricing and admin dashboards.
- Built booking flows including group and custom tour booking with split payments, multi-vendor food menu pricing and property management portals. Several of these platforms are still live in production.
- Converted PSD designs to pixel-accurate HTML with animations and built custom Joomla modules and components for multiple client projects.

PERSONAL PROJECTS

iTodoist · React, TypeScript, Tauri v2, Zustand, Dexie.js

2025 - Present

- Built an offline-first desktop task manager modeled on Todoist, with IndexedDB storage through Dexie.js: task, project and label CRUD, drag-and-drop ordering, recurring tasks, a calendar view and a ⌘K command palette.
- Designed the component styling system from scratch without a UI library. Currently adding sync with the Todoist REST API v2, starting with pull sync.

HomeSync · React, TypeScript, Supabase, PWA

2024 - Present

- Building a family management PWA for a multi-home joint household: EB and LPG bill tracking, an elderly-friendly grocery picker and expense splitting across members.
- Adding offline support, Supabase real-time sync and role-based access, with separate views for household admins and members across 3 linked homes.

EARLY CAREER

Trainee Web Developer · Unity Technologies & Morgenall, Chennai / Bangalore

2016 - 2017

- 200+ hours of hands-on practice across PHP, MySQL, HTML/CSS/JS at Morgenall (2016). Built 10+ web pages and an online shopping mini-project independently at Unity Technologies (2017).

EDUCATION

BSc Computer Science · Jamal Mohamed College, Trichy (CGPA 7.4)

Jun 2015 - Apr 2018

CURRENTLY LEARNING

System design: micro-frontend patterns, module federation and multi-team UI platform design, DDIA and ByteByteGo.

Next.js App Router: React Server Components, streaming SSR and parallel routes, applied in a personal Next.js project.

Applied AI: GitHub Copilot for PR review and test generation, and local models with LM Studio and Qwen3-Coder.

Languages: English (fluent), Tamil (native)
